

# Total Intravenous Anaesthesia Sets

High flow distal Codan valve (up to 280 mL/min) and anti-siphon valves (to prevent free-flow and back-flow) for the syringe pumps included

Microbore tubing used in all Tivatek™ kits ensures a low priming volume and reduces drug wastage

Anti-kink bridge as additional safety feature

High specification non-kink tubing offers a reduced risk of occlusion – even with several tight knots in the infusion line, drugs continue to run at flow rates set

2-part TIVA Infusion Sets with integral needle-free access ports and back check valve now available
