Stat-Check CO_2 Indicators

The STAT-Check is used as an adjunct assessment tool for verification of successful ventilation/ intubation. Ventilation, intubation and circulation are confirmed by carefully watching for colour change of the CO_2 indicator.

Every second counts!

A simple twist removes the cap and immediately activates CO_2 detection

- Both DEHP and latex free
- Can be used for <4 hours
- Ideal for emergency situations

Suitable on all patients ›2.2 Kg body weight

Stat-Check CO2 Indicators

The colour of the indicator cartridge suggests the percentage of the end-tidal CO_2 in the concentration range of 0 to 5%.

The colour of the cartridge may be compared to the label to give an approximation of end-tidal CO_2. Lack of colour change may indicate improper intubation.

Colour indication of CO_2 Presence

0% CO_2 PRESENT

5% CO_2 PRESENT

Active Resuscitation / Ventilation
