

As a result of COVID-19, we have seen an exponential increase in the use of face masks

Global shortages have been met with an increase in the number of masks being produced and worn by healthcare professionals (HCPs). The biggest rise is in the production of the ear-loop designed masks. These types of masks are designed for occasional – short term usage. However, most healthcare staff are now wearing masks all-day-everyday. As a result, many HCPs are experiencing discomfort and even tissue damage behind their ears.

There were several home made solutions to help reduce the pressure on the ears from face masks. These temporary solutions had two limitations,

1. Infection Control, many of these devices were reusable and there is a risk of potential contamination throughout the day.
2. Environmental impact, many of these devices were plastic, resulting in an increase in amount of plastics being disposed after each use.

COMFI-FIX Eco-Friendly Mask Extenders

- One-Size-Fits-Most
- Adjustable Notches help provide a more suitable/ tighter fit for clinicians
- Single-use mask extenders reduce the risk of cross-infection
- Made of a 100% recyclable cardboard instead of plastic

Fannin would like to acknowledge the support provided by Royal Cornwall Hospitals NHS Trust in the development of the COMFI-FIX Eco-Friendly Mask Extender.
